Welcome To Chempro Pharma Private Limited

Chempro is focussed on developing new manufacturing technologies, including custom synthesis of new molecules. We began in the field of specialty intermediates for pharmaceutical applications and developed our own purification technologies for manufacturing highly pure intermediates for API production. At a later stage, we integrated forward to manufacture finished formulations for both veterinary and human consumption. Due to our completely integrated operations in the pharmaceutical sector, we continuously learn about the quality needs for an API based on the performance of the finished formulation as they must pass their Bioequivalence Studies. We are a manufacturer of API's and Formulations in India and we export to Japan, China, Indonesia, North America Latin America and African sub-continent. We are an ISO compliant company and our facilities are WHO-GMP and EU-GMP approved.
